

RAZON CONSTRUCTION CHEMICALS

AN ISO 9001-2008 COMPANY

SEASONER 1223 & CLEAR COAT 513

SEASONER 1223 is a unique aluminum seasoning agent, used on aluminum formwork, which allows smooth, clean release of concrete from the first cycle itself.

It is done only one time, at the plant, before dispatch of aluminum formwork as follows:-

Method of Use: Place the finished (ready to ship) formwork on a horizontal surface. Clean the surface with a good detergent, so that it is free from any oils / grease or loose dust. Coat SEASONER 1223 on the clean surface, it will start fizzing which indicates seasoning reaction. This reaction will go on for 2 -5 minutes. If any edge is yet not seasoned or area is scratched re-apply SEASONER 1223. Allow it to dry completely.

That's all. Now stack - pack and ship your formwork.

SEASONER 1223 ensures a smooth, clean release of concrete from the first cycle itself, and a dimensionally correct form (due to elimination of mechanical cleaning) at his project.

CLEAR COAT 513 (Surface sealer, neutral colour lacquer) is a high bond, solvent base, quick drying, flexible, transparent coating, which is mildly glossy, UV resistant and medium abrasion resistant.

For aluminum surfaces, clean with a dry cloth and remove any oils/greases. On a dry surface apply by brush or spray.
