GB 143

RAZON

GB 143

Wooden and metal shuttering materials after few cycles of use loose edge uniformity, become warped, allowing cement slurry to flow out after concreting, depleting cement in concrete or RCC and hence raise strength and quality concern for RCC and concrete.

GB-143 is developed to seal openings between shuttering plates & plywood to ensure no cement slurry flows out after concrete is poured.

GB-143 is quick sealing, high filler, greasy material capable of flowing easily between shuttering plates thus eliminating concrete/cement slurry from flowing out.

It is easy to clear and remove from shuttering material after shuttering. It is greasy hence does not obstruct concrete flow in vertical membranes.

GB-143 is easy to apply, no special skill is necessary for its usage or application. It is used to seal shuttering plate joints just before application of shutter coating (Shutter Coat SC-17000) for form release and lubricity.

GB-143 is available in convenient to handle 180 kgs drum packing.

No.	PRODUCT – DATA	
1	Colour	Golden
2	Consistency	Easy to use Paste like consistency.
3	Packing	180kg drums
4	Shelf life	12 months when stored in sealed containers in a cool & dry place away from direct sunlight.

Rev-001 Dated-16/07/2022

More From Razon

- Waterproof Tie-Rod Hole Filler
- Shuttering Oils & Lacquers
- Concrete Admixtures
- Tile Adhesives & Tile Grouts
- Non Shrink Grouts & Micro concrete
- Block Jointing Mortars
- Plaster Additives
- Bonding Agent

It is strongly recommended that site trials be conducted using site conditions and available raw materials to evaluate the product. Since site materials and conditions are beyond our control and since above suggestions and recommendations are based on our site trials and laboratory product evaluation & trials, and since methods of use at site are beyond our control. Hence, no guarantee can either be implied or enforceable. All Razon datasheets are updated on a regular basis. It is the user's responsibility to obtain the latest version.
